Car emissions

Putting the brakes on climate change

Green demands at a glance:

An effective CO₂ reduction strategy must pursue the following objectives:

- An average CO₂ emissions limit value for passenger cars of 120 g/km by 2012 must be set, to be achieved solely by technical improvements to vehicles
- A follow-up limit value of 80 g/km for 2020 must be set now
- The parameters for determining the limit values for the various vehicle types must provide an incentive to cut down on weight
- Financial penalties, for exceeding limit values, must be considerably higher than the cost of CO₂ reduction measures
