Belo Monte Mega-Dam

The Amazon up for grabs?

CONFERENCE DOCUMENTATION

- [Watch the recorded video stream](#)

CONFERENCE PRESENTATION Belo Monte is a controversial mega-dam complex on the "big bend" of the Xingu river, a tributary of the Amazon. Like other mega-projects, it is claimed that such large scale development will improve living conditions for local people, in line with the Brazilian government's slogan "development starts with energy". But who benefits? And who pays the bill? Experts say that Belo Monte will produce a mere fraction of the projected electricity, while it risks huge social and environmental impacts, breaching the rights of the local population to access fisheries and forest. Critics argue that it will entail further construction contracts across the whole region while clearing the forest for mining. How are EU citizens implicated through investments and shares in European companies which are consortia members? What are the legal challenges and options, what are the corruption allegations, what trials have been brought to the courts, and what has happened with them? What are the alternatives to these kinds of lucrative, publically-funded, expensive, high impact, low yield prestige projects? Find out through presentations and debate between civil society and players in the legal, political and business worlds from both sides of the Atlantic, hosted by the three Green MEPs who visited the site and stakeholders in July.

CONFERENCE PROGRAMME 15:00 - 15:15
