Trends

Figure 6 below shows the evolution of the use of C&V in humanitarian food assistance over time.

In 2016, allocations for cash-based interventions for humanitarian food assistance represented about 54 percent (the cash component of nutrition interventions was marginal), which is comparable to the figure of 55 percent reported for 2015. This slightly lower figure reflects a change in our internal reporting system introduced in 2016, which now reports multi-purpose cash transfer programs separately, without a breakdown per sector. The 54 percent share does not include the food component of multi-purpose cash grants. Including the food component of such grants means that approximately 70 percent of assistance related to food was in the form of cash-based assistance.
